

Take the puzzle out of color matching.

Nothing delivers the complete color matching picture like ShadeVision®.

With the guesswork involved in traditional shade guides and lab orders, it's no wonder about 50% of all esthetic restoration remakes are the result of unacceptable shade matching.*

The most detailed and comprehensive color matching system available, **and the only to receive REALITY's 5-Star rating**, ShadeVision takes out all of the guesswork.

The cordless, handheld ShadeVision instrument includes a touch screen display for unique "line of sight" viewing and proper positioning.

▶ Capture the most precise color images possible.

Unlike digital cameras, ShadeVision provides a consistent, calibrated light source, which allows for the capture of true color information that cannot be derived from a photograph.

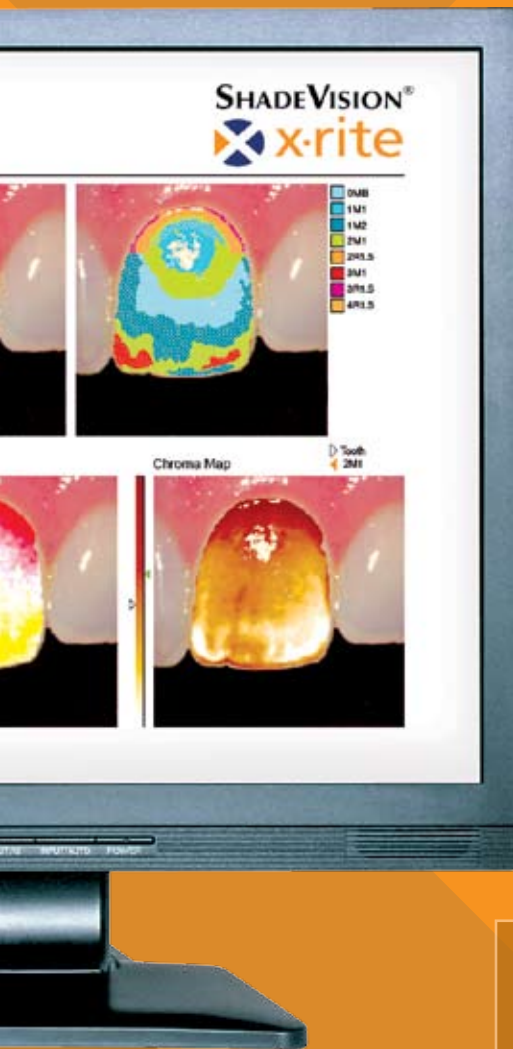

Using proprietary optics and filter technologies, ShadeVision creates precise color images that contain over 22,000 pixels of information. Its unique color analysis tool maps up to 50 regions of the tooth for three dimensions of color definition – value, hue and chroma. Nothing provides more color information to fabricate the most esthetically accurate restorations possible!

Single Tooth Report, a ShadeVision exclusive.

*Collaborative Techniques, Winter 2002

Lab technicians can use ShadeVision to verify the color match of the fabricated crown.

► **Detailed work order generation.**

ShadeVision generates work orders with unmatched detail for your lab. All color image files are uploaded directly from the handheld instrument to a PC. Images and work orders can be sent to the lab via e-mail or a disk.

► **Virtual Try-In to verify color at lab... a ShadeVision exclusive!**

ShadeVision's exclusive Virtual Try-In can help eliminate the repeat patient visits, returned crowns, additional labor and material costs, and wasted chair time caused by unacceptable color matching.

ShadeVision software enables the lab technician to compare an image of the fabricated restoration side-by-side with the original image sent by the dentist. The color accuracy of the restoration can be quality controlled in the lab without the presence of the patient. So you can be assured of an accurate match the first time. . .every time!

NEW in ShadeVision 4.0:

BEST SHADE COMPASS feature searches all guides for best match

SNAPSHOT IMPROVEMENTS simplify image import

BLEACHING INDICATOR illustrates whitening progression

COLOR ANALYSIS comparing gingival and incisal areas of hue, value and chroma

INCREASED DATABASE MANAGEMENT offers more database manipulation features

“...no other shade taking system comes close...”

More and more of your colleagues are solving the color matching puzzle, boosting patient satisfaction and building their practices using ShadeVision. . .

- ▶ “My patients and I enjoy that the restoration will be a ‘perfect match’ the first time. . . . There is definitely a ‘Wow’ factor. . .the patient will view you as being on the cutting edge of dentistry.”

Dr. Kevin Ward, DDS, Fishers, Indiana

- ▶ “ShadeVision provides us with the finest details of shade and color needed to create high-quality restorations. We consider it an extremely valuable member of our team!”

Chester Garcia, COO, da Vinci Dental Studios, West Hills, California

- ▶ “After carefully considering units from several different manufacturers, I found ShadeVision to be the best combination of both user-friendliness – on both ends of the dentist/CDT interface – and accuracy. Since I started using it, I have been able to realize dependably superior shade matches that leave little to be desired.”

Barry F. McArdle, DMD, Portsmouth, New Hampshire

- ▶ “ShadeVision’s Virtual Try-In has proven to be one of the greatest quality control tools available to us. No other shade taking system comes close to matching the system’s robust features. We have added a number of accounts to our lab because we use ShadeVision.”

Jim Schroeder, Schroeder Dental Laboratory, Northbrook, Illinois

ONLY FROM X-RITE. THE WORLD LEADER IN COLOR MEASUREMENT.

The world’s largest companies rely on proprietary X-Rite technology to measure and control color in imaging & media, medical, industrial and retail applications. No one else brings this best-of-breed technology to dentistry.
